Surgical Anatomy of the Right Upper Quadrant After Cytoreductive Surgery

Introduction/Background On the basis of evidence substantial effort is exerted by gynecologic oncologists to achieve no residual macroscopic disease for obtaining best oncologic outcomes in cytoreductive surgery performed for ovarian cancer. In this regard, dealing with upper abdomen metastases and being familiar with related surgical procedures is essential. Right upper quadrant cytoreduction harbors serious potential of complications and morbidities, and therefore one of the most time-consuming and challenging procedures. Good knowledge of surgical anatomy is crucial for performance of these procedures and techniques and avoiding complications and potential morbidities.
