<sup>a</sup>American Indian, Alaska Native, Native Hawaiian, other Pacific Islanders, unknown, and those not reported are grouped together.

<sup>b</sup>Levels are not mutually exclusive since patients with 2 or more lesions are counted once for each lesion location. More lesions may have been present than are reported here since per the RECIST guidelines (version 1.1), when >1 measurable lesion is present at baseline, all lesions ( $\leq 5$  total lesions and  $\leq 2$  lesions/organ) should be identified as target lesions and will be recorded and measured at baseline. Excess lesions (>5) and nonmeasurable disease are designated as nontarget lesions. Multiple nontarget lesions involving the same organ may be reported as a single item on the case record form.<sup>20</sup> Thus, if a patient had 2 or more nontarget lesions in the same location, they were only counted once.

<sup>c</sup>Includes colon, liver, lung, pancreas, rectum, skin, and stomach.

<sup>d</sup>Includes colon, liver, lung, rectum, and stomach.
