**Combining novel agents with radiotherapy
for gynecologic malignancies: beyond the
era of cisplatin**

Co-authors: Lilie Lin, David Lakomy, Matthew Ning,
Fiona Simpkins, Anuja Jhingran

While platinum-based chemotherapy remains the standard when combined with radiotherapy for locally-advanced gynecologic cancers, novel therapies are under active investigation and show promise.

Drugs that augment immune-activation and DNA-damage show potential to enhance the effects of radiotherapy.

Well-established agents used in other diseases including diabetes and HIV may have synergy with radiotherapy through diverse pleiotropic mechanisms.
