

Table 1. Pathological findings of this case.

Uterus	Endometrial endometrioid adenocarcinoma G2, 2.5 cm, myometrial invasion 0.3/1.6 cm without lympho-vascular invasion (LVSI). Negative surgical margins. No cervical stroma invasion.
Right ovary	Mixed endometrioid G2 with a minor component of clear cell carcinoma
Left ovary	Clear cell carcinoma (5 mm)
Right pelvic lymph nodes.	1 micro- (0.06 cm) e 1 macro- (0.4 cm) metastasis of carcinoma in 2/19 right pelvic lymph nodes.
Left pelvic lymph nodes	14 negative lymph nodes
Para-aortic right lymph nodes	17 negative lymph nodes
Para-aortic left lymph nodes	12 negative lymph nodes
Omentum	Negative
Peritoneal washing	Negative
The final diagnosis was endometrial cancer stage IIIC1 (the lymph node metastases were from the endometrial cancer as established after an accurate revision).
