

INTERNATIONAL JOURNAL OF GYNECOLOGICAL CANCER

Urinary diversion after pelvic exenteration for gynecologic malignancies

Carlos Martínez-Gómez, Martina Aida Angeles, Alejandra Martinez, Bernard Malavaud, Gwénaél Ferron

Techniques

Considerations

Selection of technique

- Patient risks
- Disease type
- Healthcare institution

Postoperative care

- Learning of diversion management

Complications

- Urinary infection
- Lithiasis
- Ureteral leakage

Quality of life

- No major differences

Conclusions

- **No ideal technique**
- Discussion of pros and cons
- Urinary reconstruction **individualized** for each patient
- Strong patient **engagement** with continent diversions
- Need of **centralization** of pelvic exenteration

Patient's choice
