¹ p-value is obtained by applying permutation Log-Rank test with 5000 permutation times if events count N<3

² If a variable contains certain levels event=0, then there is no hazard ratio or p-value provided

³ 'Postoperative chemotherapy' and 'Platinum Cycles' related variables are analyzed using landmark analysis with landmark time set to be 4 months.

FIGO (Federation of Gynecology and Obstetrics); IHC (Immunohistochemistry); MMR (Mismatch Repair)
