Objectives

ESGO developed clinically relevant and evidence-based guidelines for the peri-operative care of women with advanced ovarian cancer who undergo debulking procedures, as part of its mission to optimize, standardize and homogenize quality of care.

Development process

Key areas

- ✓ Timing of surgery in relation to targeted and antihormonal agents
- ✓ Preoperative bowel preparation
- ✓ Skin antisepsis and hair removal
- ✓ Safety checklists, positioning, retractors
- ✓ Anesthesia, pain-&volume management
- ✓ Complications management: upper abdomen, urological, gastrointestinal, thoracic, bleeding
- ✓ Timing and types of stoma reversal
- ✓ Antimicrobiological management
- ✓ Thromboprophylaxis and VTE treatment
- ✓ Wound considerations
- ✓ Nutritional support
- ✓ Prehabilitation, physiotherapy, enhanced recovery, prevention of ileus
- ✓ Frailty scores
- ✓ Psychooncological, holistic support
